

Alugbin, Abiodun Olutola

SENIOR SOFTWARE ENGINEER AND TECHNICAL LEAD

+4571358113 | alugbin.abiodun@gmail.com <https://www.github.com/LordRahl90> | <https://www.linkedin.com/in/lordrahl001>

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years of experience designing and scaling distributed systems, cloud-native platforms, and enterprise applications across logistics, payments, e-commerce, and SaaS domains.

Proven track record delivering business-critical solutions for global organizations including DSV, CellPoint, and Vivino. Experienced in leading technical initiatives, mentoring engineers, driving architecture decisions, and building high-performance backend systems using Go, Java, Kafka, Kubernetes, and cloud platforms including AWS, Azure, and GCP.

Passionate about software architecture, platform engineering, observability, and building teams that deliver reliable and scalable products.

CORE COMPETENCIES

- Software Architecture
- Distributed Systems
- Event-Driven Architecture
- Microservices
- Technical Leadership and Team Mentoring
- Cloud-Native Development
- Platform Engineering
- API Design & Integrations
- System Scalability & Reliability
- Observability & Monitoring
- DevOps & CI/CD
- Code Reviews
- Agile Software Development
- Stakeholder Collaboration

EXPERIENCE

Senior Software Engineer | Cellpoint | Copenhagen

Oct 2024 - Till Date

- Design and implement integrations with multiple payment providers, enabling secure and reliable transaction processing across the payment platform.
- Delivered integrations supporting Apple Pay and other payment gateway solutions for enterprise customers.
- Developed operational dashboards, monitoring solutions, and alerting strategies using Grafana and observability tooling, improving platform visibility and incident response.
- Participate in architecture and design reviews, contributing to technical decisions, scalability improvements, and engineering standards.
- Perform code reviews and collaborate closely with engineers across teams to maintain code quality and platform reliability.
- Contribute to cloud-native services deployed on Kubernetes running in Google Cloud Platform environments.

Technologies: Go, GCP(GKE, Spanner, BigQuery, Secrets Manager), Kubernetes, Postgres, Docker, Helm Charts, TraceQL, LogQL, PromQL.

Senior Backend Engineer | DSV | Copenhagen

July 2023 - September 2024

- Designed and implemented backend services supporting cargo measurement and operational data processing across DSV's logistics ecosystem.
- Developed Digital Cargo Services that aggregate measurement data from multiple vendors and expose standardized information to warehouse and transportation systems.
- Integrated several Transportation Management Systems (TMS), including both legacy and modern enterprise platforms.
- Designed and implemented Warehouse Communication Services that aggregate warehouse operational data and facilitate communication with warehouse automation systems.
- Contributed to the design and implementation of event-driven services using Kafka and Kafka Streams.
- Mentored junior engineers through code reviews, technical guidance, and architecture discussions.
- Provided technical consulting and implementation reviews for other engineering teams, helping improve system quality and technology decisions.
- Collaborated with product owners, architects, and engineering teams to deliver scalable and maintainable solutions running on Azure Kubernetes Service (AKS).

Technologies: Java, C# SpringBoot, .NET Core, Kafka, Kafka Streams, Postgres, Docker, Azure Pipeline, AKS, React.

Senior Backend Engineer | PSQR | Copenhagen

Dec 2022 - June, 2023

- Maintained and enhanced a traceability platform used to track and verify product lifecycle information.
- Improved frontend applications and user experience through collaboration with product and engineering teams.
- Optimized CI/CD workflows and deployment processes using GitHub Actions, improving development efficiency and release reliability.
- Contributed to architectural discussions and technical improvements across backend and frontend systems.
- Supported cloud-native deployments running on Google Cloud Run and containerized infrastructure.

Technologies: Java, Typescript, ReactJS, ReactNative, Guice, Docker. Github Actions, Google Cloud Run.

Senior Backend Engineer | Vivino | Copenhagen

Oct 2019 - Oct 2022

- Designed and implemented a scalable webhook platform enabling automated merchant order notifications and integrations.
- Developed advanced shipping and fulfillment logic supporting multiple delivery providers and complex fulfillment workflows.
- Integrated third-party logistics and shipping partners to improve merchant fulfillment capabilities.
- Implemented pickup-location services through external shipping provider integrations.

- Contributed to subscription-based order automation initiatives, improving customer purchasing experiences.
- Collaborated with cross-functional teams to enhance merchant platform functionality, performance, and reliability.
- Participated in system design discussions and continuous improvements to highly available, large-scale e-commerce services.
- Worked extensively with event-driven architectures utilizing Kafka and cloud services within AWS environments.

Technologies: Go, Gorm, MySQL, Kafka, Docker, AWS Services eg. SQS, S3, Redshift. NewRelic

Senior Software Developer | Andela | Lagos

May 2019 – September 2019

- Maintained and enhanced e-commerce applications and merchant-facing solutions.
- Developed custom functionality including coupon management and operational workflows.
- Contributed to the development of an incident management platform using React and Node.js.
- Collaborated with distributed engineering teams following modern software development practices.

Technologies: Git, Nginx, Redis, ElasticSearch, Javascript (jQuery), React, Ruby.

Senior Software Developer | CardinalStone Registrars | Lagos

May 2018 – May 2019

- Gathered requirements and designed software solutions supporting registrar business operations.
- Developed backend APIs for electronic public offering (eIPO) platforms using Laravel.
- Designed and implemented electronic dividend advisory platforms used to notify shareholders.
- Developed e-rights management systems supporting shareholder participation and administration.
- Built electronic accreditation solutions that streamlined shareholder registration and verification processes.
- Introduced containerization practices to simplify deployments and improve operational consistency

Technologies: PHP (Slim, Lumen, Laravel), Git, Nginx, Redis, ElasticSearch, Javascript (jQuery), Docker, Ubuntu

Senior Software Engineer | TM30 Global Limited | Lagos

Jan 2017 – December 2017

- Collaborated with stakeholders to gather requirements and define technical solutions.
- Designed system architectures and implementation strategies for customer-facing applications.
- Developed and maintained backend platforms supporting mobile portal services.
- Built marketplace solutions connecting agricultural producers and consumers.
- Integrated external payment gateway services to support transaction processing requirements.
- Introduced modern deployment practices using containerized environments.

Technologies: PHP (Slim, Lumen, Laravel), Git, Nginx, Redis, rabbitMQ, ElasticSearch, Javascript (AngularJS, nodeJS), Docker, Centos, Ubuntu

Full Stack Developer | Stallion and Associates | Lagos

February 2014 – Dec 2016

- Designed and delivered accounting, bursary, and student management systems for educational institutions.
- Developed and deployed web-based portals supporting student administration and self-service operations.
- Built inventory and accounting solutions for commercial organizations.
- Developed biometric attendance management systems integrating fingerprint verification and reporting functionality.

Technologies: PHP (Vanilla, Laravel), JavaScript(jQuery), C#(winforms) Mysql, Apache, Amazon EC2, Ubuntu, Ionic, Git

TECHNICAL LEADERSHIP AND IMPACT

- Mentored junior and mid-level engineers through code reviews, technical coaching, and design discussions.
- Participated in architecture and solution design reviews across multiple enterprise systems.
- Led engineering quality initiatives focused on maintainability, reliability, and scalability.
- Designed and implemented observability solutions using Grafana, OpenTelemetry, Prometheus, LogQL, and TraceQL.
- Delivered integrations across payment providers, logistics platforms, warehouse systems, transportation systems, and e-commerce services.
- Collaborated with cross-functional stakeholders including architects, product owners, QA engineers, and platform teams to deliver business-critical software solutions.

EDUCATION

Higher National Diploma in Computer Science

September 2014 - November 2016

The Federal Polytechnic, Ede, Osun State, Nigeria.

- Designed and built a mobile instant messaging application with a discussion forum for students.
- Developed a payroll management system with java.

TECHNICAL SKILLS

Programming Language	Go (most preferred), Java, PHP, .NET Core. JavaScript
Web Apps Frameworks	Echo, SpringBoot, Slim, Lumen, Laravel, expressJS, Gin, .NET Core
Front End Tools & JavaScript Frameworks	Vue (Most Preferred), React, ExpressJS
Data Stores, ORMs	PostgreSQL, MongoDB, MySQL, SQLite, CockroachDB, Eloquent, Gorm, SQLC, ClickHouse, Cassandra
Mobile App Development	Flutter
Web Services Communications	REST, gRPC, Websockets, SSE
Web Servers/Platforms	Nginx, Apache, Caddy.
Cloud Services	Azure, GCP, AWS, DigitalOcean
Project Management	Asana, Trello, Redmine, Jira
DevOps	Docker, Travis CI, Circle CI, Github Actions, Docker-compose, Kubernetes, ArgoCD, Terraform

Monitoring	OpenTelemetry, Grafana LGTM stack, Uptrace, Sentry, Datadog, NewRelic
Other Technologies and Skills	Git, GCP CloudRun, CloudSQL, AWS - SES, SQS, SNS, S3,EC2, ECS, EKS; Message Brokering - Kafka, RabbitMQ, NATS, Redis; Aerospike, ElasticSearch, Prometheus
